Summary

Software Engineer with hands-on experience building web applications and backend systems using TypeScript, Node.js, PostgreSQL, and MongoDB. Built REST APIs, third-party integrations, payment workflows, asynchronous job processing, and LLM-powered applications. Familiar with AWS and GCP, with a strong foundation in backend engineering and system design.

Work Experience

Full Stack Developer Intern

Oct 2025 – Feb 2026

TechlyAssist

- Developed Stripe payment integration and user onboarding system with REST APIs, JWT authentication, and automated subscription management
- 5+ third-party OAuth integrations (Slack, Gmail, Trello, GitHub, Jira) with secure token encryption, async job processing (BullMQ), and error handling.
- Implemented LangSmith tracing and performance monitoring to improve debugging and identify bottlenecks in AI agent workflows.

Freelance Software Developer

April 2025

Invoice Management System

- Developed a full-stack invoice management for small businesses to simplify accounting and inventory tracking
- Built using React.js, Express.js, MongoDB, and deployed on GCP using Docker for containerization.
- Built real-time inventory updates, product search, categorization, invoice generation, and automated tax calculations using React, Express, and MongoDB.

Projects

AI Coding Agent | *Next.js, GPT-4.1, AI SDK, GitHub API, Vercel Sandbox*

June 2025 - Aug 2025

- Built an AI coding agent with GitHub OAuth that clones user-selected repositories into a Vercel Sandbox, autonomously explores and modifies the codebase using agentic tools, and raises a pull request via the GitHub API.
- Integrated Vercel Sandbox to enable secure, isolated cloud execution of GitHub repository code.

Appointment Booking Platform | *Next.js, PostgreSQL (Drizzle ORM), Google Calendar API*

Aug 2025 - Sep 2025

- Built a two-sided appointment platform where sellers define availability and buyers search, book, and manage appointments; seller confirmation automatically creates a Google Meet meeting and syncs the event to both users' Google Calendars.
- Implemented Google OAuth and role-based access control for buyer and seller workflows, with PostgreSQL transactions and constraints to prevent double-booking during concurrent slot requests.

LLM-powered AI Form Builder | *Next.js, OpenAI GPT-4.1, LangChain, Cloudinary*

Oct 2025

- Built an AI-driven form generation system that converts natural language prompts into fully functional, dynamic web forms using OpenAI APIs.
- Automated form schema creation, validation logic, and UI rendering using LLMs, eliminating repetitive frontend work.

Skills

Languages: TypeScript, JavaScript, Python, SQL, C++, C

Backend: Node.js, Express.js, REST APIs, OAuth 2.0, JWT

Databases: PostgreSQL, MongoDB

Cloud & Infrastructure: AWS (EC2, S3, Lambda, CloudFront, IAM, VPC), GCP (Cloud Run, Cloud Storage), Linux, Docker

CS Fundamentals: OOP, Data Structures & Algorithms, Operating Systems, DBMS, Computer Networks

Education

Bachelor of Technology in Electronics & Computer Engineering

Nov 2022 – June 2026

Maharashtra Institute of Technology, Chhatrapati Sambhajnagar

CGPA: 7.65
